

Your Source for Food Processing Controls

"Partners In Production"

We specialize in:

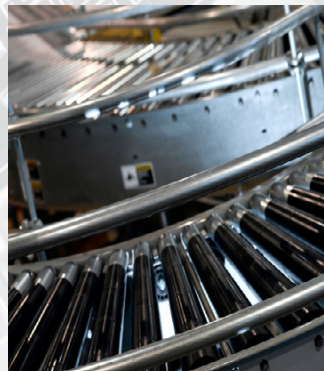

- Food Processing Controls
- Temperature Monitors
- Heat Element Controls
- Pump Controls
- Fan or Damper Controls
- Control Enclosures
- Solid State Voltage Control Modules
- Process Control Modules
- Variable Speed Motor Control Devices
- Sequencing Assemblies
- Operator Interface Assemblies
- System test Interface Assemblies
- Replacement Part Manufacturing

API Alliance is a dedicated designer and manufacturer of process controls. From easy to use operator interface devices to complex assemblies, API Alliance has it *"under control"*.

The API Design Team, has available for your immediate use, our standard sequence timing, process control and I/O controls. Our sales and design team will also work with you to individually tailor our off the shelf controls, modules, and features to specifically dedicate a designed control to meet your needs. This approach allows your product to have the function, interface and features you need with minimal NRE or extended design/development time required.

The API Team, in collaboration with your staff, will tailor each manufacturing program to match your specific needs. We will work with you to develop cost effective manufacturing plans; including purchasing strategies, documented assembly processes, quality and testing standards and customized shipment procedures.

▶ The API Alliance Advantage

- API's engineering design group can offer assistance in upgrading your design, making producibility enhancements and implementing cost reduction options.
- API production operators take ownership for each project, allowing for schedule flexibility, accountability and pride in ensuring every project is done well and on time.
- The Alliance production staff is highly qualified, well trained and efficient, even making complete manual assembly cost effective.
- API Alliance provides the necessary machining, fabrication and sourcing to meet your mechanical packaging needs. Protection and decorative finishes, such as powder coating, screen printing and panel labeling can all be provided by API - your single "resource to source."
- The API team has the ability to provide engineering and documentation as well as manage the entire process of providing aftermarket and/or "out of production" replacement stock assemblies.
- The API Team provides solutions from a one piece prototype board build, up to 100,000 units per year.
- API's custom web based manufacturing "interlink" offers you the ability to have specific insight into your open order fulfillment, on hand component level inventory, finished goods status, shipping reports and overall process control.
